SUBCELLUIAR LOCATION: Type I membrane protein (By similarity).
TISSUE SPECIFICITY: Detected in brain, placenta, spleen, stomach, small intestine, lung and in plasmacytoid pre-dendritic cells.
SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.
SIMILARITY: CONTAINS 1 TIR DOMAIN.
SIMILARITY: CONTAINS 27 LEUCINE-RICH REPEATS (LRR).

      POLYMORPHISM: POSITION 161 IS ASSOCIATED WITH PLATELET-SPECIFIC ALLOANTIGEN SIBA. 51BA(-) HAS THR-161 AND SIRA(+) HAS MET-161.

SIBA IS INVOLVED IN NEONATAL ALLOIMMUNE THROMBOCYTOPENIA (NATP).

DISEASE: DEFECTS IN GFIBA ARE ONE OF THE CAUSES OF BERNARD-SOULIER SYNDROME (BSS). BSS PATIENTS HAVE UNUSUALLY LARGE PLATELETS AND DISEASE: DEFECTS IN GFIBA ARE ONE OF THE CAUSES OF YON WILLEBRAND DISEASE: DEFECTS IN GFIBA ARE ONE OF THE CAUSES OF VON WILLEBRAND DISEASE: DEFECTS IN GFIBA ARE ONE OF THE CAUSES OF VON WILLEBRAND DISEASE. THIS AUTOSOMAL DOMINANT BLEEDING DISCADES IS CAUSED BY AN INCREASED AFFINITY OF GP-1B FOR SOLUBLE VWF RESULTING IN IMPAIRED HEMOSTATIC FUNCTION DUE TO THE REMOVAL

**Smirnova I., Poltorak A., Chan B.K.L., McBride C., Beutler B.;

**Thylogenetic variation and polymorphism at the Toll-like receptor 4

**Incur. (Inc.) Genome Biol. 1.RESEARCH002.1-2.10(2000).

**L. (In.) Genome Biol. 1.RESEARCH002.1-2.10(2000).

**Inmune response to bacterial lipopolysaccharide (LPS) Acts via MyD88, TIRAP and TRAF6, leading to NF-kappa-B activation, cytokine secretton and the Inflammatory response (By similarity).

**L. SUBUNIT: Belongs to the lipopolysaccharide (LPS) receptor, a multi-protein complex containing at least CD14, MD-2 and TLR4.

**End Ambritation Complex TIR domains (By similarity).

**L. SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.

**L. SIMILARITY: CONTAINS 1 TIR DOMAIN.

**L. SIMILARITY: CONTAINS 20 LEUCINE-RICH REPEATS (LRR).

"MD-2 and TLR4 N-linked glycosylations are important for a functional lipopolysaccharide receptor.";
J. Biol. Chem. 277:1845-1884(2002).
-: FUNCTION: Cooperates with MD-2 and CD14 to mediate the innate immune response to bacterial lipopolysaccharide (LPS). Acts via MyD88, TIRAP and TRAF6, leading to NF kappa B activation, cytokine secretion and the inflammatory response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ç

Binds MD-2 via the extracellular domain. Binds MyD88 and TIRAP via
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Xu Y., Tao X., Shen B., Horng T., Medzhitov R., Manley J.L., Tong L., "Structural basis for signal transduction by the Toll/interleukin-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SUBCELLUIAR LOCATION: Type I membrane protein.

SUBCELLUIAR LOCATION: Type I membrane protein.

PETSOES PECIFICITY: Highly expressed in placenta, spleen and peripheral blood leukocytes. Detected in monocytes, macrophages, dendritic calls and several types of T-calls.

PTM: N-glycosylated. Glycosylation of Asn-526 and Asn-575 seems the necessary for the expression of TuR4 on the cell surface and the LPS-response. Likewise, mutants lacking two or more of the other N-glycosylation sites were deficient in interaction with
                                     Medzhitov R., Preston-Hurlburt P., Janeway C.A. Jr.; "A human homologue of the Drosophila Toll protein signals activation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Smirnova I., Poltorak A., Chan E.K.L., McBride C., Beutler B.; "Phylogenetic variation and polymorphism at the Toll-like receptor 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  POLYMORPHISM: Allele B (Gly-299, Ile-399) is associated with a blunted response to inhaled LPS. SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY. SIMILARITY: COUPLAINS 1 TIR DOMAIN. SIMILARITY: CONTAINS 1 TIR DOMAIN.

R MyB88, TIRAP and TRAFG, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response (By similarity).

L SUBINIT: Belongs to the lippoolysaccharide (LPS) receptor, a multi-protein complex containing at least CD14, MD-2 and TLRA.

EL SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

L SUBILARITY: GONTAINS 1 TIR DOMAIN.

C -- SIMILARITY: CONTAINS 21 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PUNCTION: Participates in the innate immune response to Grampositive bacteria and fungi. Acts via MyD88 and TRAF6, leading to NF kappa B activation, cytokine secretion and the inflammatory response. Recognizes mycoplasmal macrophage-activating lipopeptide-2kD (MALP-2), soluble tuberculosis factor (STF), phenol-soluble medulin (PSM) and B.burgdorferi outer surface protein A lipoprotein (OspA-L) cooperatively with TLR2. SUBBUNIT: Binds TLR2 via their respective extracellular domains. Binds MyD88 via their respective TIR domains (By similarity). SUBCELLULAR LOCATION: Type I membrane protein. Plasma membrane and TISSUE SPECIFICITY: Detected in monocytes, CDILC+ immature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ρλ

-!- CATALYTIC ACTIVITY: ATP + L-isoleucine + tRNA(11e) = AMP + diphosphate + L-isoleucy!-tRNA(11e).

-!- COFACTOR: BINDS 1 ZING ION (BY SIMILARITY).

-!- SUBUNIT: MONOMER (BY SIMILARITY).

-!- SUBCELIULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.

"Determination of the prorelaxin nucleotide sequence and expression of prorelaxin messenger ribonucieic acid in the golden hamster.";

BIOL. Reprod. 53:454-461(1995).

-I- FUNCTION: RELAXIN IS AN OVARIAN HORMONE THAT ACTS WITH ESTROGEN TO PRODUCE DILATATION OF THE BIRTH CANAL IN MANY MAMMALS. IT BEARS MATURE YOUNG, AND ALLOWS SEPARATION OF THE PELVIC BONES.

-I- SUBGNIT: HETERODIMER OF A B CHAIN AND AN A CHAIN LINKED BY TWO

-I- FUNCTION: RECOGNIZES THE DOUBLE STRANDED SEQUENCE 5'-CGAN(6)TGC-3'
AND CLEAVES BILATERALLY AND SYMMETRICALLY OUTSIDE THE SEQUENCE TO
RELEASE A 34-BASE PAIR FRAGMENT. METHYLATION OF THE RECOGNITION
SEQUENCE OCCURS ON THE ADENINE IN EITHER ONE OR BOTH STRANDS.
-I- COFACTOR: MAGNESIUM.
-I- SUBUNIT: HETEROTEIMER OF TWO ALPHA AND ONE BETA SUBUNIT. BOTH
SUBUNITS ARE NECESSARY FOR DNA-BINDING.
                                                                                                                                                                                                                                            SEQUENCE FROM N.A.
